

Intelligent Testing

Medical Technology

Certification in
Accredited Test Laboratory

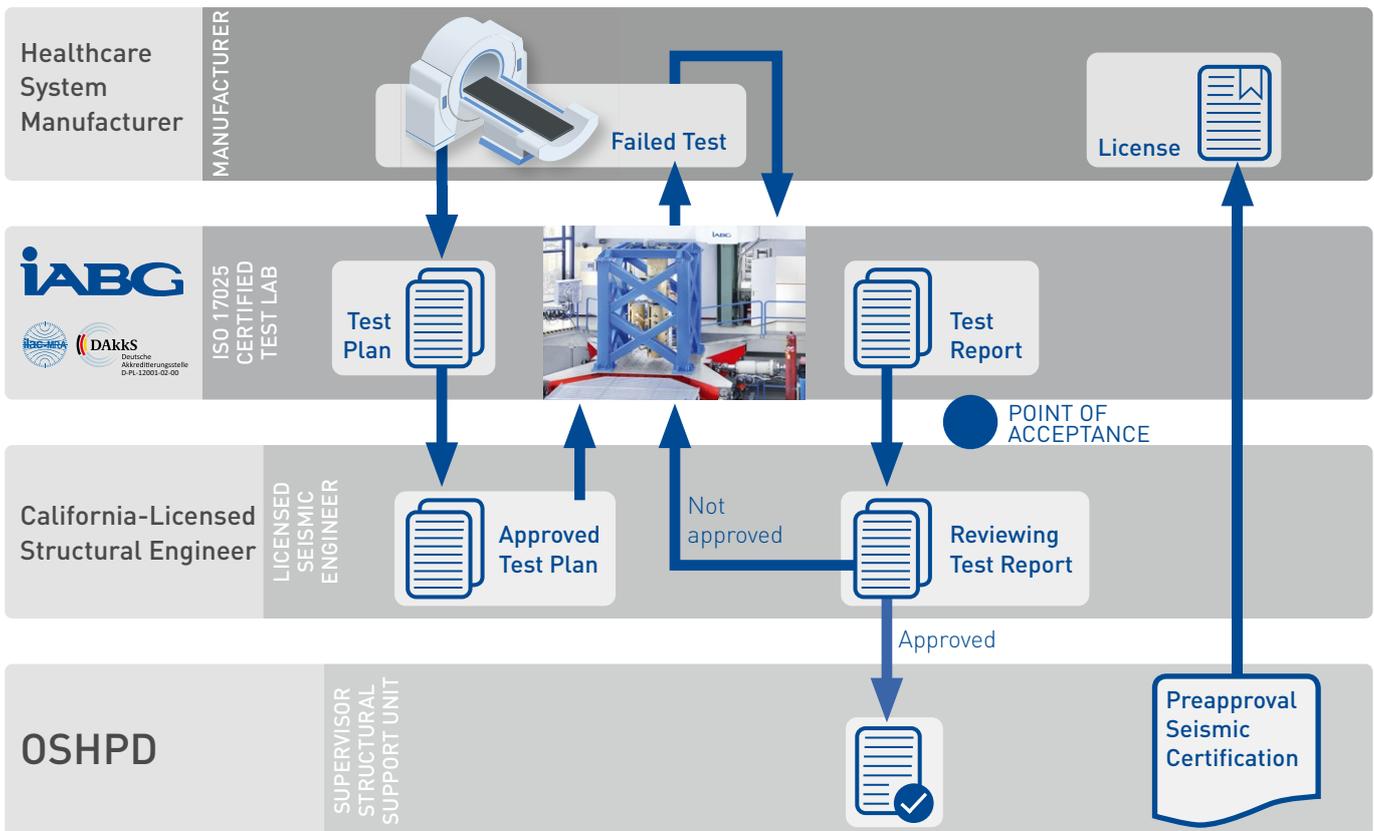

Medical Technology • Certification in Accredited Test Laboratory for Vibration Testing in compliance with DIN EN ISO 17025

Special, often country-specific, **seismic safety** regulations apply for plant and equipment from the energy and medical technology sectors.

In particular, the US state of California has its own test standards and acceptance procedures. These are monitored by special authorities who then certify the qualification of the plant and equipment accordingly. This certification process includes the planning and performance of tests by a test laboratory accredited

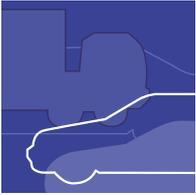

in compliance with ISO 17025 under the supervision of a *California-Licensed Structural Engineer* and the actual certification by the *Office of Statewide Health Planning & Development (OSHPD)*.

IABG is the only company in Europe listed by the OSHPD and is thus authorised to perform certification processes.

Certification process for medical technology equipment

- Single-source process performance in compliance with OSHPD requirements
- Consulting and test plan drafting
- Laboratory accredited in compliance with ISO 17025 to perform vibration tests and function tests
- Performing x-rays for functional tests possible
- Acceptance testing and creation of application documents in collaboration with recognised specialists
- Attainment of the *Special Seismic Certification Preapproval*

About IABG

IABG offers integrated, ground-breaking solutions in the sectors Automotive • InfoCom • Mobility, Energy & Environment • Aeronautics • Space • Defence & Security. We provide independent and competent consulting. We implement with future viability and target orientation. We operate reliably and sustainably. Our success is based on an understanding of market trends and requirements, on our staff's technological excellence and a fair relationship with our customers and business partners.

As a development partner we provide quality control services and develop solutions in the areas of functional efficiency, quality, design, and materials. We offer a broad spectrum of products and services, ranging from numerical analysis to experimental testing to the realisation of turnkey, customised test systems that we operate for the customer.
