Commitment of IABG's suppliers and subcontractors

Sustainability shapes our actions and is a substantial part of our corporate strategy. We demand responsible conduct in the sense of sustainability along the entire value creation chain. IABG has therefore defined a binding code of conduct that applies to the entire company and its employees. Its principles are also binding for all suppliers, agents and consultants (hereinafter referred to as the supplier) of the company. This questionnaire and the accompanying statement provide information on the principles and requirements IABG demands from its suppliers of goods and services and obligates them to act sustainably with regard to their responsibility for man and environment. Suppliers and service providers of our suppliers are also obliged to comply with these principles and requirements. These rules of conduct at the same time refer to commitments we also make to our customers. The adherence to these rules of conduct is the pre-condition for any consideration in the selection of suppliers on part of IABG.

Principles of Conduct

1. General Principles

Every supplier is personally responsible for his actions and conduct as well as for the resulting consequences and always acts to the best of his knowledge and belief.

2. Respect of Human Rights

Compliance with human rights and social standards is the underlying principle for any form of interaction. Conditions of work that violate such rights and standards contradict this principle. That equally applies within the company of the supplier, as well as to the cooperation with business partners. We also expect our suppliers to ensure that when they appoint private or public security forces, they do not commit any human rights violations. The supplier treats business partners, customers, suppliers, employees, and colleagues fairly and co-operate reliably in a spirit of mutual trust at all times. The supplier respects the dignity of human life and promotes compliance with and the protection of human rights. Every supplier is under obligation to ensure compliance with these generally accepted, fundamental rights.

- a. Prohibition of discrimination or harassment
 - The supplier treats all colleagues, potential employees, customers, suppliers and all other individuals with whom he transacts business, with fairness and respect and without displaying discrimination, harassment and other improper conduct due to reservations with regard to gender, age, race, skin, ethnic or national origin, nationality, religion, handicap, sexual orientation, political affiliation and position within the company. The aim is to promote diversity, equality and inclusion.
- b. Ensuring the freedom of association and the right to collective bargaining The right of employees to form unions or organisations with the purpose of promoting and protecting their interests at their discretion, as well as the right to join, retire from, or to be active for such bodies, is respected. However, the occupational duties of employees may not be impaired hereby.
- c. Prohibition of child and forced labour
 - The supplier tolerates neither child labour, nor any other exploitation of children and young people. A permission to work may not be granted prior to the end of compulsory schooling; in no case to adolescents under the age of 15 years. The supplier opposes all forms of forced labour. No employee may be forced to work based on direct or indirect threats and/or intimidation. Employees are only to be recruited if they have made themselves available for work on a voluntary basis. Employees must be able to end their work or employment at any time. In addition, unacceptable treatment of workers, such as psychological severity, sexual harassment and degradation, has to be avoided at any time.
- d. Respect for land, forest and water rights
 We expect our suppliers to protect and respect land, forest, and water rights and under no circumstances to carry out forced evictions.

3. Compliance with Laws and Regulations

Every supplier is active worldwide subject to a policy of adherence to the respective laws and regulations and behaves morally correctly. Internal rules, standards and instructions apply as well. Of course, this obligation also applies to valid directives and guidelines as well as to recognized values of the cultural areas and countries where the supplier is active.

a. Antitrust and competition laws

IABG and therefor as well the supplier is committed to fair and open competition on all markets worldwide. The supplier may not participate in illegal bid rigging that excludes limits or impairs competition.

b. Export Controls and Sanctions

At the same time, all applicable regulations on the import and export of goods and services as well as sanctions lists must be observed.

c. Financial Responsibility

Financial responsibility and compliance with the legal requirements of proper accounting and disclosure regulations must be a matter of course for our business partners.

4. Corruption, compliance, bribery

All business activities must be based on the highest standards of integrity. In connection with business activities of any kind, suppliers may not offer and/or attempt to offer undue advantages to business partners, their employees or to other third parties. This also applies to claiming and accepting undue advantages. This is of particular importance, if kind and scope of such advantage are suited to inadmissibly affect the recipient's actions and decisions and also extends to third parties (which must not be asked to evade this regulation). The supplier must follow a zero-tolerance policy in prohibiting all forms of bribery, corruption, extortion, and fraud.

5. Health & occupational safety

All suppliers shall ensure a safe and healthy work environment. The adherence to all safety regulations is indispensable, irrespective of whether they are stipulated by law, or regulated by the responsible authorities or in the context of company guidelines.

6. Environment protection

When completing their tasks all suppliers have to prevent the development of harmful environmental effects by avoiding and/or taking measures in the sense of a sustainable management and shall carefully handle natural resources. We therefore expect all of our suppliers to meet or consider the following aspects of environmental protection and their own ecological responsibility: energy efficiency and renewable energies; avoidance or

minimization of air pollution, noise and greenhouse gas emissions; careful use of natural resources and a reduction in the consumption of raw materials; avoidance of waste or sensible handling of waste and hazardous substances; a sense of responsibility in handling chemicals; avoidance and treatment of industrial wastewater. The adherence to the respectively applicable environmental regulations is a basic condition. Environmental damages are of course to be immediately reported to the competent authority.

7. Preservation of the natural resources

The supplier may not deprive land, forests or waters, the use of which secures the livelihood of people, in violation of legitimate rights. He must refrain from harmful soil changes, water and air pollution, noise emissions and excessive water consumption if this harms the health of people, significantly impairs the natural basis for producing food or prevents people's access to safe drinking water or sanitary facilities. At the same time, all possible efforts must be made to protect species, combat deforestation and maintain soil quality. In addition, the supplier should standardize, routinely monitor, check and, if necessary, treat general emissions from operational processes (air and noise emissions) as well as greenhouse gas emissions before they are released. The aim is, on the one hand, to provide appropriate reporting but also to find economical solutions to reduce any emissions and contribute to decarbonization.

8. Dealing with conflict minerals

For the conflict minerals tin, tungsten, tantalum, and gold, as well as other raw materials such as cobalt, the company is establishing processes in accordance with the Organization for Economic Cooperation and Development (OECD) principles for fulfilling the duty of care to promote responsible practices Supply chains for minerals from conflict and high-risk areas and expects the same from its suppliers. Smelters and refineries without appropriate, audited due diligence processes should be avoided.

9. Data protection and IT security

All suppliers shall comply with the principles of employee and business partner data protection. In the context of the assigned task, the care necessary to protect personal data is to be applied at all times. The supplier aligns his safety standards and his actions to protect data against loss as well as against access and illegitimate use by unauthorized

parties. In addition, his business partners are accordingly obligated to carefully handle such data as well.

10.Confidential information

Business and professional secrets are to be treated confidentially by all suppliers. This also applies to any other information that IABG, its contracting parties and customers are interested in keeping confidential. Without permission, such information may not be disclosed to unauthorized parties. This obligation also survives the termination of the contractual relationship.

11.Conflict of interests

We expect our suppliers to pass on the requirements of the IABG Code of Conduct to their own suppliers and service providers. Suppliers must inform IABG immediately of any situation that could lead to a conflict of interest, e.g. if employees of IABG enjoy professional, private and / or significant financial advantages through the cooperation or have shares in a company of the supplier.

12. Reporting code of conduct violations

Information about misconduct and violations of the Code of Conduct can be reported to the IABG Compliance Officer. His job is to act as a contact person for the company's business partners and employees for questions and problems relating to compliance. Alternatively, all of our suppliers' employees also have access to the IABG whistleblower system, in which reports of potential or existing violations can be submitted online or by telephone in various languages. All reports will be treated at least confidentially and, if requested, anonymously. All concerns are taken seriously and investigated accordingly. IABG representatives, who have been explicitly obliged to maintain confidentiality, receive the information and arrange for further processing, if necessary, the taking of remedial or preventive measures and feedback via the whistleblower system - always while maintaining confidentiality.

However, it is ensured in any case that complaints or reports of possible unlawful behavior can be submitted without fear of reprisals, threats, harassment, or other disadvantages. We also expect our suppliers to ensure protection against adverse measures for their business partners and employees when violations are reported.

Social and ethical responsibility

The compliance with social standards and the adherence to human rights are a mandatory condition along the entire value creation chain. They are based on ILO's core labour standards as well as on the UN Global Compact principles for the protection of human rights and the environment. Among other things, they concretely concern the prohibition of child and forced labour, the prohibition of discrimination, the guarantee of freedom of association and the right to collective bargaining.

1.	Was a Code of Cor	nduct defined and implemented in your company?
	Yes □	No □

Statement of commitment

The supplier hereby warrants that he acknowledges the sustainability requirements to their full extent and, as far as not done already, he will accordingly implement them in the company and make them accessible to all employees. The requirements will furthermore be verified using suitable instruments in regular periods and – in the event of violations – measures will be taken accordingly. In addition, the supplier undertakes to comply with the above-mentioned guidelines and principles of the IABG Code of Conduct and to implement them in his company.
