

NATO Military Committee meets at German high-tech service provider IABG

Ottobrunn, 5 November 2025 – The NATO Military Committee visited the German high-tech service provider IABG (Industrieanlagen-Betriebsgesellschaft mbH). The visit, which included NATO military representatives and members of the International Military Staff (IMS), was an important occasion to review the topic of Integrated Air and Missile Defence (IAMD).

LtGen van Ingen, Dean of the NATO MC, emphasized: *“Integrated Air and Missile Defence is of utmost importance for the Alliance.”*

The simulated scenario and strategic wargaming provided by IABG offered a valuable opportunity to discuss IAMD with true experts in the field. *“IAMD systems have been a cornerstone of NATO’s deterrence and defence posture since the 1950s. It is both a political message - within and beyond the Alliance - and a set of military capabilities that secure the skies, safeguard Allied territory, and protect our people in times of peace, crisis, and conflict,”* says IABG CEO Prof. Dr. Schwarz.

Dr. Karsten Deiseroth, Division Manager Defence and Security, stated: *“I am very glad that we were able to provide a good foundation for today’s discussions and laid the basis for further developments in the field of IAMD.”*

IABG’s independence ensures objective advice for well-founded decisions. Its comprehensive testing, analysis, and simulation services guarantee transparency, predictability, and compliance. By combining scientific rigour with practical experience, its experts create solutions that strengthen operational capability and resilience.

IABG | Industrieanlagen-Betriebsgesellschaft mbH

Industrieanlagen-Betriebsgesellschaft mbH (IABG) is one of Europe's leading high-tech service companies, specializing in analysis, simulation & testing, and facility operations. The overarching theme of its solution portfolio is safety and security - covering the safety of newly developed high-tech products and transportation systems, as well as the security of the state, economy, and society. In this context, IABG provides technical and scientific services to both private and public sector clients across industries such as automotive, rail & transport, energy, public sector, aerospace, and defence. IABG employs 1,200 highly qualified professionals at its headquarters in Ottobrunn and at customer-oriented locations both in Germany and abroad.
